Rockville, MD 20857

Dear Jane Henney,

I recently read an article about genetically engineered foods. The tampering of our food supply is bad enough. Long term effects of these foods are unknown. However, I am especially worried about the fact that these foods do not have to be labeled.

Please do something about this. There should be **mandatory labeling of all genetically engineered foods**. Consumers have a right to know what they are buying and what they are eating.

Thank you,

Kathryn Lorfald
